A NEW ERA FOR RETAIL

The retail sector not only demonstrates remarkable resilience year after year, but also proves its ability to adapt and evolve in response to changing macroeconomic conditions and customer requirements. In our 34th edition of Main Streets Across the World, the central themes are “flexibility” and “strength,” highlighting how retailers are rising to the challenge and positioning themselves for future growth.

The retail sector has been buffeted by the broader economic conditions resulting from interest rate hikes in 2022 and 2023, aimed at combating strong inflation. Implications have included a rapid increase in the cost of living, weak consumer sentiment and sluggish economic growth. As a result of such headwinds, it is not surprising that luxury brands have experienced a notable slowdown in revenue growth from approximately 15% in 2022 to 0-4% in the current financial year. The pullback in spending in parts of Asia Pacific has had a significant bearing on this year’s revenue performance. However, the fact that companies continue to post overall growth reinforces many brands’ underlying strength. More optimistically, as the pace of interest rate cuts gathers across the world, this will drive economic recovery and provide cost of living relief and real wage increases—all of which are significant tailwinds for the sector.

Despite recent challenges, retailers across the world remain committed to the strength of having a physical retail presence in super-prime destinations as evidenced by the ongoing levels of extremely tight vacancy rates.

In light of current economic conditions, retailers have needed to balance cost pressures with evolving consumer loyalty preferences. Due to the pace of change, brands have needed to be agile and to adopt a data-first approach to drive innovation and remain profitable. At the same time, retailers beyond luxury brands are also increasingly recognising the benefits of super-prime retail streets. This shift has led to the growth of sports, cosmetics and wellness brands competing for space. As a result of this competitive tension for limited space, year-over-year (YOY) rental growth has occurred in over half of the 138 locations tracked, with some showing significant growth.

This report focuses on headline rents in best-in-class urban locations across the world which, in many cases, are linked to the luxury sector.

The common element of success across all retailers, though, has been an increased focus on the customer to elevate their brand and build ongoing loyalty. In the physical world, this is best achieved by committing to the highest quality locations and providing unique experiences. Blending this physical proposition with a strong digital and technological offering, including through social media, raises expectations and anticipation of these experiences, driving further engagement. For these reasons, we see continued strength in the world's most iconic retail destinations as retailers and customers alike continue to find them the most compelling expression of brand in an increasingly complex environment.

HEADLINE RENT AND RANKING CHANGES

RENT GROWTH

- In global terms, rents across the 138 locations tracked have crossed another benchmark – now being on average nearly 6% above pre-pandemic levels, thanks to strong rental growth of over 4% YOY.
- Globally, 57% (79) of locations experienced positive rental growth, with just 14% (19) registering rental decline. The remaining 29% (40) were stable YOY.
- Beneath this global average, the Americas continues to be the strongest performing region, propelled by rent growth of almost 11% YOY in the U.S. – a significant increase from last year. In comparison, rent growth in Europe and Asia Pacific slowed, registering growth of 3.5% and 3.1%, down from 4.2% and 5.3%, respectively.

GLOBAL MAIN STREET RANKING CHANGES

- Milan's Via Montenapoleone overtook New York City's Fifth Avenue as the world's most expensive retail destination; the change marks Europe's first time at the top in report history. This reflects robust rental growth on the Italian street, exceeding 30% in the last two years, further bolstered this year by the euro's appreciation against the U.S. dollar.
- Further changes occurred in position three, with London's New Bond Street leapfrogging Tsim Sha Tsui in Hong Kong, pushing the latter into 4th spot despite positive rental growth this year.
- Avenue des Champs-Élysées in Paris retained 5th position, but the gap to 6th narrowed following 25% YOY rental growth in Tokyo's Ginza district.
- While ranking changes have been limited, both Suria KLCC in Kuala Lumpur and Biblioteksgatan in Stockholm moved up two places to 19th and 25th, respectively. In contrast, Ilica Street in Zagreb and Oscar Freire Jardim in São Paulo moved down two places to 37th and 40th, respectively.

KEY INDICATORS AND GLOBAL RANKINGS

As the world digested the impacts of a steep rise in interest rates, starting in 2022, prime retail destinations have for the most part successfully weathered the storm.

At the global level, rents increased by 4.4% on average over the past year – a modest slowing from 4.8% in the year prior (Table 1). The Americas led at 8.5%, although this was predominantly due to the strength of U.S. locations, which averaged 10.9% rental growth YOY. In contrast, growth in Asia Pacific and Europe slowed from 5.3% and 4.2%, respectively, to 3.1% and 3.5%. However, this slowdown in Europe at the headline level is a little misleading. Rental growth last year was largely driven by exceptionally strong inflation in a few key markets such as Türkiye. Excluding these markets from the analysis, European rental growth was closer to 2.1% YOY in 2023. Consequently, the Q3 2024 results indicate an acceleration compared to the previous year.

Importantly, the world crossed another significant benchmark with rents on average now sitting above pre-pandemic levels. This feat had long been achieved in the U.S., but Asia Pacific has now crossed this mark and Europe continues to eat away at the deficit. Together, this has resulted in rents now being on average almost 6% higher than before the onset of the pandemic. In numerical terms, 72 (52%) locations are at or above pre-pandemic levels, while 66 (48%) are still yet to fully recover.

¹ Pre-pandemic is taken as Q4 2019 in APAC and Q1 2020 in Americas and Europe

TABLE 1: AVERAGE REGIONAL RENTAL CHANGE
(IN LOCAL CURRENCY)

	Pre-pandemic to Q3 2024 ¹	Q3 2024 YOY
APAC	1.0%	3.1%
Americas	29.8%	8.5%
Europe	-1.8%	3.5%
U.S.	34.7%	10.9%
World	5.9%	4.4%

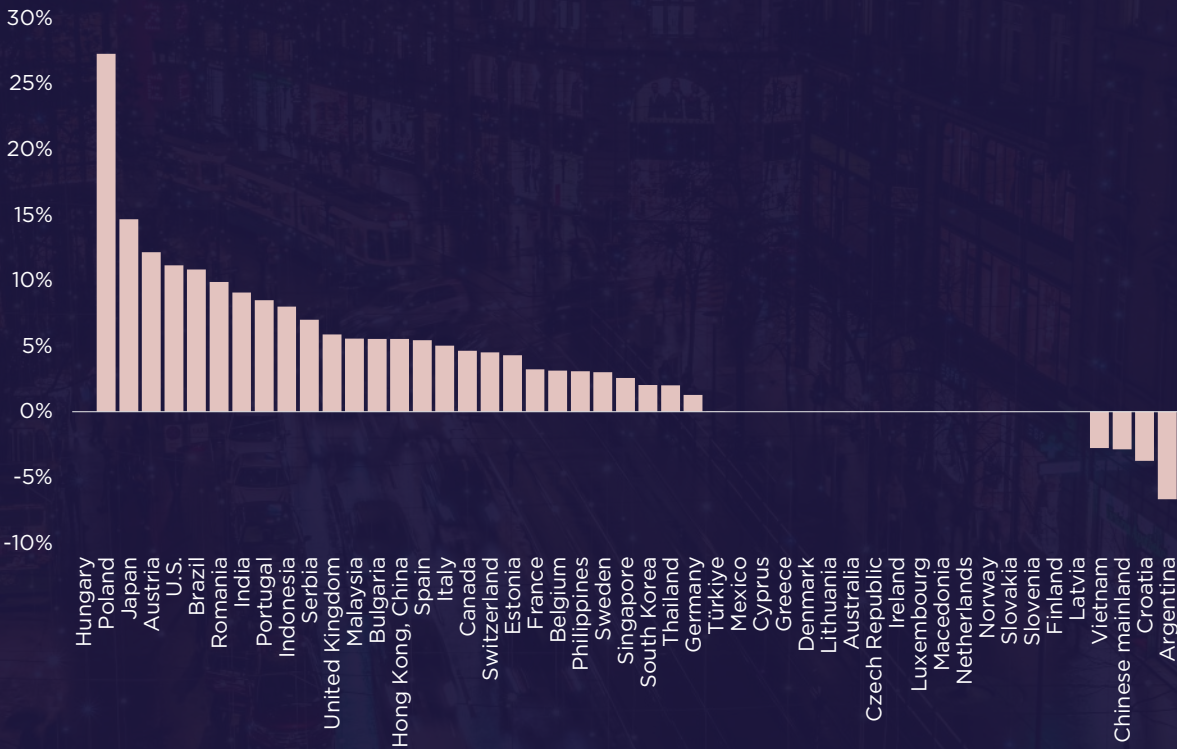

Source: Cushman & Wakefield

Surpassing pre-pandemic rent levels is a feat that has long been achieved in the U.S., but Asia Pacific has now crossed this benchmark and Europe continues to eat away at the deficit.

Beneath these global and regional trends, there is significant variation at the local level, which highlights the diversity in performance between markets. Miami's Design District has led the pack with rental growth of over 66% over the past year and 150% rental growth over the past four years. Such rapid growth is reflective of high levels of demand from designer brands, world-class restaurants and art installations all keen to secure space in a precinct that continues to drive ongoing interest from occupiers and developers alike. Plans have recently been announced for the development of a 65,000-square-foot (sf) mixed-use project incorporating both retail and office components. In the same city, Miami's Brickell Boulevard Corridor and Wynwood Region also performed strongly, experiencing rental growth of over 33% and 25% YOY, respectively.

Continuing in the U.S., a further seven retail streets experienced double-digit rental growth over the past year while conditions were somewhat more subdued in New York, San Francisco and Washington DC, where rents were flat. In contrast, rents in Seattle's CBD contracted by 6%. Across the rest of the Americas, conditions are somewhat more subdued. Rents have declined across most cities in Canada in reflection of lacklustre economic growth and rising unemployment, though Toronto's Bloor Street and 17th Avenue in Calgary bucked this trend with growth of 15% and 31%, respectively.

FIGURE 1: AVERAGE RENTAL GROWTH YOY BY MARKET (Q3 2023 - Q3 2024)

Source: Cushman & Wakefield

In Europe, while overall rental growth was relatively modest, there were a few standout locations that recorded robust growth over the year. Váci Utca in Budapest led the region, with rents growing 27% YOY (though it is noted that this was off a relatively low base as the city ranked 29th overall), driven by strong retailer demand in an environment of constrained supply. More meaningful growth in absolute terms was experienced in London's Regent Street and New Bond Street, where rents grew 16% and 13%, respectively, which equates to a \$300 (USD) increase in the case of New Bond Street. Outside of this, positive rental growth was experienced across many locations in Western and Southern Europe, reflective of the strong tourism inflows not only associated with this being an Olympics year but also ongoing strong demand from U.S.-based tourists. Only two out of the 57 locations tracked in Europe recorded rental decline in the year: Kalku Street in Riga (-3%) and Ilica Street in Zagreb (-7%).

The situation in Asia Pacific closely resembles wider macroeconomic performance within the region. The Indian economy has been the strongest major economy in the world this year, a trend reflected in its robust rental growth performance. Indiranagar 100 Feet Road in Bengaluru leads the region, reporting rental growth of 32% YOY. Whilst reporting relatively more modest uplifts, MG Road in Pune, Anna Nagar in Chennai, Fort/Fountain in Mumbai and Park Street in Kolkata all recorded annual rent growth in excess of 10%. Rent growth across the 16 locations tracked across India averaged a 9% increase YOY. In a similar vein, Southeast Asian economies have also performed strongly, driven in part by robust domestic consumption, which has led to positive rental growth of up to 7% in Jakarta and between 1% to 5% elsewhere in the sub-region.

Retail locations in Japan surprised to the upside, defying weak growth conditions. Having been stable over the past 4 years, rents moved higher in 2024. Ginza led rental change at +25% YOY, though Omotesando, also in Tokyo, and Midotsuji in Osaka recorded rental growth of 14% and 9%, respectively.

In Greater China, weak domestic consumption—resulting from economic headwinds stemming from a lacklustre residential market—suppressed retail rental growth. Select locations in Shanghai, Shenzhen and Guangzhou experienced modest rental uplift, while rents were under downward pressure elsewhere. The most prevalent of these being Nanjing and Wuhan which experienced rental declines of 23% and 11%, respectively.

MAIN STREETS ACROSS THE WORLD RANKINGS BY MARKET 2024

ECONOMIC OUTLOOK

Through the course of 2024, the global economy has taken meaningful steps forward in the current cycle.

Rapid interest hikes in 2022 to 2023 have now paid dividends such that inflation is largely under control in the majority of markets around the world. This has allowed central banks to pivot and cut rates. The Bank of Canada and European Central Bank were two of the early movers, followed by the Bank of England and more recently the U.S. Federal Reserve. Interest rate cuts in Asia Pacific have been slower to materialise, partly due to inflation appearing later than other regions. Additionally, many central banks are hesitant to act ahead of the U.S. to avoid pressure on foreign exchange rates. Nevertheless, both the Royal Bank of New Zealand and the Bank of Korea have cut interest rates, indicating that inflation is well under control.

In further positive news, global economic growth has held up comparatively well at a forecast 2.6% in 2024. Recession fears in many economies have softened over the past year, reinforcing the notion that “soft landings” are achievable—something that seemed like mere hope just 18 months ago. This has bolstered consumer sentiment, which has shifted from more pessimistic views to a broadly “neutral” stance for many markets.

FIGURE 2: CONSUMER SENTIMENT FOR SELECT ECONOMIES 2000-24
(100=NEUTRAL SENTIMENT)

Source: OECD

More interest rate cuts are expected throughout the remainder of 2024 and into 2025. Overall, this should provide support for growth; however, global growth is projected to remain relatively stable, hovering around 2.7% for the year ahead. This stability is attributed to a rebalancing of economic trajectories. India and economies in Southeast Asia, which have outperformed in 2024, will normalise in the year ahead, while Europe, Australia and Japan are set to accelerate. The U.S. economy, which has shown incredible strength and resilience over the past several years, is forecast to slow as some softening in the labour market will dent business expansion and domestic consumption. Recent fiscal stimulus measures in the Chinese mainland should help provide support to the wider economy by reviving the property sector and increasing consumer confidence, with the government likely to reaffirm a growth target of around 5% in 2025.

GDP AND CPI FORECAST

GDP (REAL AVERAGE ANNUAL)				CPI (YOY)		
	2024	2025	2026	2024	2025	2026
North America	2.5%	1.8%	2.2%	3.0%	2.4%	2.4%
South America	1.8%	2.6%	3.1%	26.7%	13.1%	9.7%
Euro Zone	0.8%	1.3%	1.7%	2.4%	2.0%	1.9%
Asia Pacific	3.9%	4.0%	3.8%	2.3%	2.3%	2.3%
World	2.6%	2.6%	2.8%	4.9%	3.5%	3.0%

Source: Moody’s Analytics; Cushman & Wakefield

From a retail perspective, the sector has remained resilient. While total retail sales, in real terms, have slowed over the past year, they have largely remained close to or within positive territory. Moreover, taking a longer-term view, real consumption continues to grow in many markets (Figure 3). This is important to consider as the wider economic recovery takes hold. Interest rate cuts, together with lower levels of inflation and modest wage growth, will contribute to easing cost of living pressures and provide consumers with an increasing ability to make discretionary purchases—something that has been reigned in over the recent past.

FOCUS ON INTERNATIONAL TOURISM

Tourism, and especially international tourism, is a significant driver of super-prime retail destination performance. While inevitably there is variation at the local level, approximately 40% to 50% of luxury purchases are made while travelling. Benefits extend beyond the luxury sector with tourists also spending in other retail segments and on leisure activities, thereby adding to the overall vibrancy of these locations.

On a positive note, 790 million tourists travelled internationally between January and July this year. This is 11% above 2023 levels and just 4% less than 2019. Furthermore, revenues from international tourism spending, at \$1.8 billion (USD) in 2023, were virtually the same as 2019. Tourism in Europe and the Americas is practically back to or above pre-pandemic levels and although Asia Pacific has been playing catch up the past couple of years, it has made significant inroads over the past year. Together, these factors point to a full recovery in international tourism in H2 2024, with full-year passenger arrivals forecast to reach 2% higher than 2019 levels. Further growth is expected in 2025 with global outbound passenger growth forecast at almost 13% YOY, led by Asia Pacific but with strong support from all regions.

INTERNATIONAL ARRIVALS BY REGION

DOUBLING DOWN ON PHYSICAL SPACE

As economies worldwide transition from a restrictive monetary position to one that is more accommodative to foster stronger growth, retailers stand to benefit from these tailwinds. Ahead of that growth trajectory, retailers continue to reaffirm the importance of physical retail stores as part of their go-to-market strategy. Indeed, in many respects they are more important than ever.

There are several key reasons for this, though showcasing innovation and brand presentation are amongst the most important. Together, these build brand experience, which then translates into brand loyalty. While e-commerce plays a role in an omni-channel strategy, it is the physical embodiment of the brand that customers connect with. For this reason, luxury brands continue to scour strategic locations in search of suitable space. Jacquemus' recent opening in Soho, New York and Toteme taking space on Los Angeles' Melrose Avenue demonstrate that ongoing commitment to quality physical retail space.

While luxury brands have long been the benchmark for setting the standard of occupying standout locations, more retailers are looking to emulate them. There is perhaps no clearer articulation of this than IKEA, traditionally an occupier of suburban retail warehouse space, opening a new store in London's Oxford Street in 2025 and committing to a new development on New York's Fifth Avenue scheduled for completion in 2028. IKEA is not alone; other retailers have been drawn to super-prime retail locations as well. Sporting footwear brands On and Hoka have experienced significant growth and are targeting expansion of flagship stores in North Asia. Examples of this trend are truly global, highlighting the universal appeal of these locations.

WHAT'S HOT ON MAIN STREET LOCATIONS IN 2024

LUXURY

FASHION

SPORT

COSMETICS

FOOD &
BEVERAGE

MIXED GOODS

This is where the competitive tension exists. As highlighted in our look-back at the world's leading retail destinations, there is comparatively little change in the most sought-after destinations from a decade ago compared to today. In short, more retailers want to expand and open new flagship stores, but the number of flagship locations is little changed. It's no wonder that vacancy rates therefore remain exceptionally tight which is fuelling, at times, exceptionally strong rental growth. The strength of "prime" continues to increase.

Such market conditions have forced a strategic response in terms of identifying where the optimum locations are, how to occupy those locations, and then driving sufficient revenue through them to remain profitable.

USING DATA TO DRIVE ENGAGEMENT, EXPERIENCE AND ENHANCEMENT

While macroeconomic conditions have curtailed capital expenditure budgets recently, there has also been a wider appreciation by retailers that more is not always better. Fundamentally, this plays out as a more targeted approach to store openings—fewer stores but with better coverage. This often means starting with a flagship location and then recreating an interpretation of that flagship store in strategically significant cities, rather than taking a country-wide approach.

The starting question is, what is a strategically significant city? And what is the optimum location in that city? Data and analytics have therefore become critical components in understanding key market dynamics, consumer demographics and foot traffic patterns, among other crucial data points. Such analysis can be incredibly granular, considering one side of the road to the other or evaluating which of two neighbouring locations is superior.

Location is just one element of this decision-making process. Identifying locations of “brand fans” is important, but curating an experience that brings them into the store is even more vital. For this reason, retailers are more focused than ever on elevating their customer experience to boost overall brand engagement. Social media continues to play a role. The power of influencers means that millions of potential customers can be

reached beyond a brand’s current base. It can also build anticipation through showcasing forthcoming collections, events and experiences from one side of the world to another.

Data and technology are integral. They can reveal how different generations engage with a brand; not only with regards to the products or experiences that it provides but also for the positive impacts it has on society. Such data can also be used to understand how customers engage with other brands, leading to brand partnering. Jacquemus and Nike have collaborated again to create a new spring collection, available across selective locations of both brands. Similarly, Victoria Beckham has partnered with Mango to reach a new audience and build loyalty earlier. There are also more experiential versions such as the Dior Spa and Sachs Club, where brands are focusing on experience and offering something new.

Going beyond this, personalisation is now expected and hyper-personalisation is the next frontier—treating each customer as an individual. This could be anything from fine-tuning relevant product recommendations to using AI to identify ideal sizes, styles and colours. Building such tailored services makes the consumer feel special and more likely to purchase.

EMBRACING AGILITY AS THE FOUNDATION OF SUCCESS

Considering these factors, it's clear that retailers must adopt more innovative, agile and flexible strategies to remain competitive in today's market. The same is true in how they are approaching real estate commitments.

Finding, securing and furnishing the optimal location requires a significant amount of time, investment, energy, and sometimes, patience. Given the sensitivity of brands, particularly luxury ones, to location, it's little wonder that more brands are acquiring their own flagship locations. This ensures long-term security of tenure as competition for prime space intensifies.

Agility is evident elsewhere. The relationship between tenants and landlords continues to evolve. Forward-thinking landlords recognise the concept of "space as a service," which can offer wider economic and social benefits. However, competitive tensions will always persist, even as they fluctuate over time. Scarcity of quality labour continues to prevail, warranting a new look at how to build loyalty within and outside of a brand. The need to evolve is everywhere.

The competitiveness of the retail sector will not diminish. Finding space, finding staff and finding customers will remain challenging into 2025 and beyond. The most successful players are those who do not settle for the way things have been done but relentlessly drive the industry forward.

APPENDIX

In locations where rental levels are usually reported as Zone A, rents in the main body of the report have been standardised so as to be able to compare with other geographies. Here we present the original base data, in local metrics and currency, without Zone A conversions.
